THE OPERATOR BLUEPRINT

PATH 20

Custom project setups

They want Claude Projects or Custom GPTs configured, not a lecture.

Who this is for

Someone drowning in a blank project who will pay for a working one.

First sale

One setup a stranger can use without you.

Time to first

3–10 days

Cash window

\$97–\$297 per setup

Tools

Claude Projects or Custom GPTs, a 5-minute walkthrough recording.

Leave this alone

Selling access to a model you do not own.

What they buy

Instructions, files, and three starter chats. Intake their actual work. Install, test, record a five-minute walkthrough. They own the project when you leave.

You are not reselling Claude. You are selling configuration. Say that out loud so nobody is confused.

The first 72 hours

Build a sample project for a job you know. Record the walkthrough. Put a \$197 button on a page. Ask five people who complained about 'I never know what to put in the custom instructions.'

The path, step by step

Step 1. Intake: the jobs, the files, the tone.

Step 2. Write instructions they can read.

Step 3. Three starter threads that already work.

Step 4. Walkthrough. Hand-off. One tweak window.

Mistakes

Keeping the project in your account. Loading their confidential files into a model against their policy. Overbuilding a second brain they will never open.

Copy and week-by-week

'I configure the project for your job. You own it. Walkthrough included.'

Day 1: sample. Day 2: page. Days 3–5: five asks. Hand off so they never need your login.

Close the book. Do the first 72 hours. Do not tour the rest tonight.
